

# ON-FARM COMPOST USE SURVEY

## **Purpose**

We invite you to participate in a research study on the impact of compost use practices on small and medium-sized Indiana vegetable farms. Your responses will help us understand the effects of compost on soil health and nutrient management.

## **Benefits**

Your input will help us develop educational resources and programs to support Indiana Farmers in making informed decisions to improve soil health. If you opt in to have samples collected from your farm, and your farm is selected for sampling, the research team will provide you with detailed soil and compost laboratory test results at no cost to you.

## **Participation**

This survey is a brief online questionnaire that should take approximately 15 minutes to complete. After completing the online survey, you can opt in to have the team visit your farm to collect soil and compost samples.

**To take the survey, please visit:**
